

Vision of the deegree Initiative

Scope

Somewhat in between of them...

Imagine there's no heaven

*Wer Visionen hat,
sollte zum Arzt gehen*

... a time frame of 5 years, with realistic expectations.

Mission statement

- A mission statement is missing – prior to the vision
 - (for the outside world) to better understand what it is all about, what the motivation to do it is
- It is about running a good business in the domain of geospatial data infrastructures (for some of us) and work together with others in that regard
- The deegree initiative can be seen as a party everybody is invited to
- The "new" deegree shall be more open, shall be a "real" open source project / initiative

Vision aspects

- Organisational setup of the initiative
- Market position, among the others
- Well-defined scope
- Community size and distribution
- Driven by community (not by technology)
- Clear outer appearance
- Well-structured inner communication
