

# Vision of the deegree Initiative

-

# Discussion results

# Vision aspects

- Organisational setup of the initiative
- Market position, among the others
- Well-defined scope
- Community size and distribution
- Driven by community (not by technology)
- Clear outer appearance
- Well-structured inner communication

# Organisational setup of the initiative

- Initiative: Owner and home of deegree
- Support the community
- Maintain the infrastructure
- Manage resource pooling
- OGC compliance certificates
- Owner of the copyright?
- How can we integrate users into the 2 committees?
- Is it still appropriate to have the 2 committees?

# Market position

- What is the intended market share?
- Who are the others?
- (Where) Is deegree different / special?
  - Complex application schemas
  - INSPIRE services, especially Download Service
  - Quite some potential in the integration of Map, Feature and Catalogue Services ("unleached potential")
- ... but at the same time be ready for simple (or more simple) applications, have a nice interface for configuration and administration etc.
- use Open Data as a driver here?

# Well-defined scope

- Still the "most comprehensive implementation of OGC and ISO standards in the Open Source world"?
- Which OGC services?
- Which encodings?
- What else? - Why?

# Community: Size and distribution

- Europe or the world?
- Individuals or institutions?
- Industry or public services?
- A user base of 100, 1.000 or 1.000.000?

# Driven by community (not by technology)

- Identification of community stakeholders
- Arrange requirements management

# Clear outer appearance

- Definition of outreach tools needed
- Outreach team?
- Outreach activity funding?

# Well-structured inner communication

- We already made some progress here but ...
-
